Education

- 2024–now **PhD in Computer science and Mathematics of Computation**, *University of Insubria*, Como
- 2020–2022 **Master degree in mathematics**, *University of Insubria*, Como
Graduation grade: 104/110
- 2022 **Teaching qualification (Italy)**, *University of Insubria*, Como
24 cfu qualification
- 2017–2020 **Bachelor degree in mathematics**, *University of Insubria*, Como
Graduation grade: 93/110
- 2013–2017 **High school diploma**, *Liceo Lugano 1*, Lugano

Publications

Research interests numerical linear algebra, numerical methods for PDEs

Braun, E. C. and Bretti, G. and Ferri, S. and Santarelli, M. L. and Semplice, M.. "*Dissolution of carbonate stones caused by CO₂ pollutant: an erosion model*". Arxiv preprint (2026)

Ferri, S. and Giraudo, C. and Loi, V. and Kuchta, M. and Serra-Capizzano, S.. "*Spectral analysis of the stiffness matrix sequence in the approximated Stokes equation*". Bol. Soc. Mat. Mex, Volume 32, pp. 102 (2026)

Barakitis, N. and Donatelli, M. and Ferri, S. and Loi, V. and Serra-Capizzano, S. and Sormani, R. L.. "*Blocking structures, approximation, and preconditioning*". Numerical Algorithms, Volume 100, pp. 1893–1927 (2025)

Master thesis

Title *De exoticis 7-sphaeris*

Supervisor Giovanni Bazzoni

Description In this paper, we retrace Milnor's studies aimed at finding homeomorphic but not diffeomorphic manifolds on the 7-sphere, through the study of 3-sphere bundles on the 4-sphere and their characteristic classes.

Bachelor thesis

Title *Mixing time for Glauber dynamics*

Supervisor Andrea Posilicano

Description This thesis work is aimed at studying the time required for the Markov chain describing the Glauber dynamics for the Ising model to reach its stationary distribution.
